

University of Utah College of Pharmacy

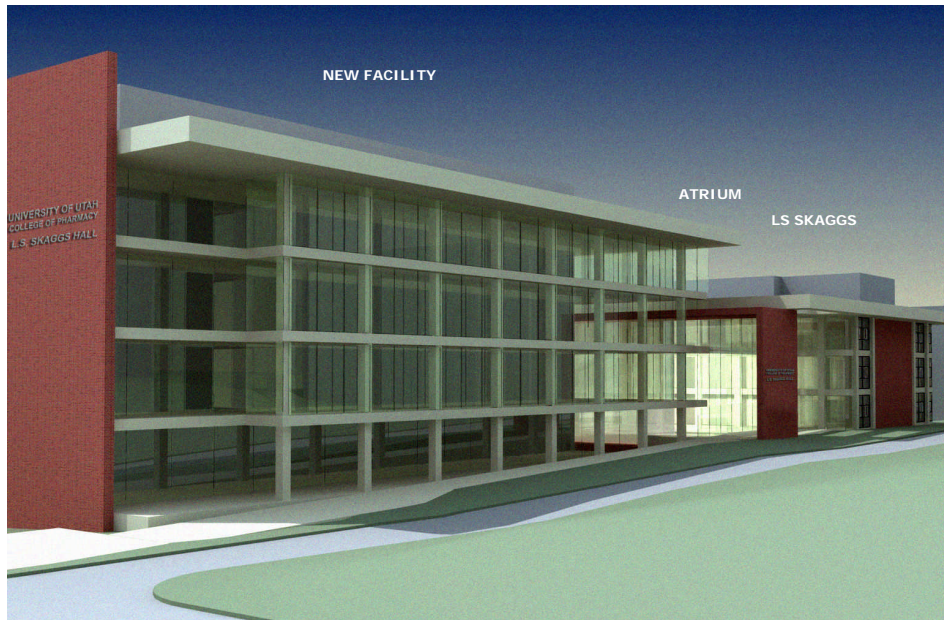

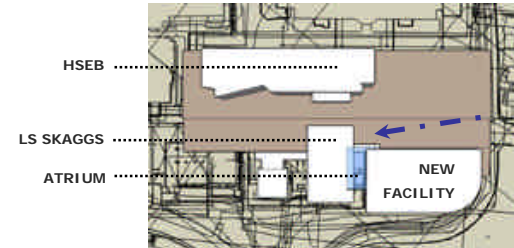

This packet of preliminary concept images were produced as part of the Master Planning process for the L.S. Skaggs Pharmacy Research Building which includes:

- Site Analysis documentation that explores the relationship of the new Facility to the Health Sciences Precinct and the University Campus at large
- Axonometric and sectional diagrams that explore the concept of an atrium that unifies the existing Pharmacy Building with the new Research Facility, thus creating a building complex
- Conceptual floor plans that define one, of potentially many schemes, for the allocation of research and support spaces within the building envelope
- Conceptual Renderings of the new Facility, which illustrate a palette of building materials that are complimentary to the existing L.S. Skaggs Building. These images emphasize the view of the atrium, the architectural element that physically speaks to the coming together of two generations under one roof.
